BRIDGET AND BURTON SIPP

ANIMAL KINGDOM ZOO

1800 JACKSONVILLE ROAD

Type: ROUTINE INSPECTION

Date: Jun-23-2010

BORDENTOWN, NJ 08505

3.75 (a)

HOUSING FACILITIES, GENERAL.

Structure: construction. Housing facilities for nonhuman primates must be designed and constructed so that they are structurally sound for the species of nonhuman primates housed in them. They must be kept in good repair, and they must protect the animals from injury, contain the animals securely, and restrict other animals from entering.

The following items must be repaired or replaced:

- Deteriorated wood is present on the side wall and around the entrance of the shelter box for the 12 brown capuchin monkeys. The damaged edges could injure the non-human primates and also leave the strength of the shelter box compromised.
- One rung of the Olive baboons' ladder is no longer secured to the frame. The baboons could injure themselves if they step on this detached rung. This rung must be replaced or repaired.
- A section of plywood, which is attached to the rafters of the mandrill enclosure, has a large hole present with jagged edges. This damaged wood could injure the mandrills. This plywood must be removed or replaced to prevent injury and to maintain structural strength.

Damaged items must be repaired, replaced or removed to prevent injury and to maintain structural strength.

TO BE CORRECTED BY: JULY 23, 2010

3.75

(1) (i)

HOUSING FACILITIES, GENERAL.

(c)

Any surfaces that come in contact with nonhuman primates must:

(i) Be free of excessive rust that prevents the required cleaning and sanitization, or that affects the structural strength of the surface:

Inspection Report

 The lower metal frame of the shift door, inside of the white faced capuchin building, has rusted thus preventing it from being readily cleaned and sanitized. This rusted frame must be repainted to prevent rust and to maintain structural strength. This will ensure that it can be cleaned and sanitized for the health of the non-human primates housed therein.

CORRECTED AT TIME OF INSPECTION.

The indoor shelf for the Black and White Ruffed lemurs is composed of a metal frame and a Formica surface. The metal frame has rusted and can no longer be readily cleaned and sanitized. This rusted frame must be repainted to prevent rust and to maintain structural strength. This will ensure that it can be cleaned and sanitized for the health of the non-human primates housed therein.

TO BE CORRECTED BY: JUNE 30, 2010

3.75 (c) (1) (ii

HOUSING FACILITIES, GENERAL.

Any surfaces that come in contact with nonhuman primates must:

(ii) Be free of jagged edges or sharp points that might injure the animals.

A section of the metal covered wooden shelf in the mandrill enclosure has rusted thus leaving it in disrepair. The mandrills have access to this shelf and the damaged, rusted edges could cause injury. The rusted metal must be removed or replaced to maintain structural strength and to protect the animals from injury.

TO BE CORRECTED BY: JULY 1, 2010

3.84 (d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

An effective program for control of insects, external parasites affecting nonhuman primates, and birds and mammals that are pests, must be established and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas.

An excessive number of flies were present throughout the Siamang building. Fly strips were available but they did not adequately trap the extreme number of flies that were present. The influx of flies can contaminate food that was provided for the Siamangs. An effective method to control flies must be implemented.

NOTE: A fly bomb was utilized during this inspection to rid the building of the flies. The non-human primates were maintained outside of the building to protect their health. CORRECTED AT TIME OF INSPECTION.

Inspection Report

3.125 (a)

FACILITIES, GENERAL.

The facility must be constructed of such material and of such strength as appropriate for the animals involved. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

The following items are in need of repair or replacement:

The metal sheeting on the front of the spotted hyenas' building has curled upward in the front, bottom right corner.
 This sharp edge protrudes into the enclosure and could cause injury to the hyenas housed therein.

CORRECTED AT TIME OF INSPECTION.

There is a small square hole (approximately 4"x4"), in the wooden floor of the Bearded pig enclosure. This hole is large enough for their legs to fall through and possibly cause injury should this occur. This hole must be covered or the floor repaired to prevent injury to the pigs and to maintain structural strength.

CORRECTED AT TIME OF INSPECTION.

The wooden, top rail of the fence between the llama and the chicken enclosure has rotted and deteriorated on both ends. This damage compromises the structural strength of the fence. This rail must be replaced.

TO BE CORRECTED BY: AUGUST 30, 2010

3.125 (d)

FACILITIES, GENERAL.

Waste disposal. Provision shall be made for the removal and disposal of animal and food wastes, bedding, dead animals, trash and debris. Disposal facilities shall be so provided and operated as to minimize vermin infestation, odors, and disease hazards.

The rib cage and hide of a cow were present in the spotted hyena enclosure in the rear of the zoo. This carcass had a rotted odor that permeated the air. The remaining portion of this carcass was not being eaten at the time of this inspection. Food wastes must be removed to minimize vermin infestation, odors, and disease hazards.

NOTE: The carcass and hide were removed during this inspection. CORRECTED AT TIME OF INSPECTION.

An exit briefing was conducted with the owner.
