Site: 001  
BETH CORLEY

Type: ROUTINE INSPECTION  
Date: May-19-2016

### 2.40 (b) (2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

- The following medication was past the labeled expiration date: panacur - Feb. 2014. This medication was intermingled with other products that are currently being used at the facility and are therefore ready for use. Expired drugs may not work as anticipated, could become contaminated, and could harm the animals. Medications must be labeled with appropriate and accurate information in order to ensure that the contents of the container can be known with certainty, that the drugs are used at safe doses, and that medications are not used past their expiration dates. The licensee must ensure that all medications used in the facility are not expired, labeled properly in accordance with standard veterinary practices, and are stored in accordance with manufacturer's recommendations. Corrected during the inspection.

### 3.84 (d)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

-- A live mouse was observed on the floor in the outdoor portion of the enclosures of the ring-tailed lemurs in the non-human primate building. A partially eaten mouse was observed in the outdoor portion of a capuchin enclosure in the medical building housing non-human primates. There is no pest contract present for the facility at the time of the inspection according to the facility representative. The facility representative states that he puts bait out weekly. Mice carry diseases and may cause illness to the enclosed animals. They can also contaminate food, water and living areas. The licensee must have a more effective program to control pests in the buildings and outdoor portions of enclosures and must ensure proper pest control throughout the facility. To be corrected by 6-1-2016

### 3.127 (d)

#### FACILITIES, OUTDOOR.

Portions of the perimeter fence do not meet requirements. In the back section of the park numerous trees are growing in, thru and over the perimeter fence which can affect the structural integrity of the fence. The perimeter fence for a facility housing dangerous animals must be structurally sound and in good repair.
